WELCOME

D. R. Griffin and Associates, Inc. of Rock Springs, Wyoming, is a Rocky Mountain regional engineering design, land surveying, drafting, mapping, project management, material procurement, and field services firm attending clients in the pipeline, oil and gas development, and utilities industries as well as local municipalities and regional government agencies. The original small shop operation was established in 1978 to provide surveying, drafting and mapping to oil and gas clients. In response to changes in client company organizations and increasing demand for professional and technical services, D. R. Griffin & Associates has grown accordingly.

The firm is now staffed with approximately fifty(50) members led by five (5) Professional Land Surveyors and two (2) Professional Engineers who are licensed in most of the western United States. To assist the professionals, D. R. Griffin & Associates employs qualified associate engineers, project engineers, technicians, drafters, surveyors, inspectors, field service crewmen, secretaries, and administrative specialists in adequate number to meet routine company and client needs. When additional manpower is needed, D. R. Griffin & Associates can supplement client projects on short notice through a network of subcontractors and seasonal employees.

D. R. Griffin & Associates has a robust inventory of well maintained modern vehicles, office equipment, survey instruments, computer workstations, lap-top computers, LAN system, internet website, drafting plotters, office and technical software, engineering copiers, and similar resources to efficiently undertake client work. Currently occupying seven of eight suites in the Hallmark Square Building, 1414 Elk Street, Rock Springs, Wyoming, the D. R. Griffin & As-

Whether the work undertaken is a small individual project requiring only a few man-hours or a start-to-finish 300 mile large diameter pipeline, D. R. Griffin & Associates has the personnel, resources, experience, and commitment to perform the job in a professional, timely and cost effective manner. For your next assignment or project needing professional services, please call D. R. Griffin & Associates at (307) 362-5028 or contact us at the mail or e-mail addresses provided. Our professionals are anxious to discuss your project and to determine how we can assist. For small jobs, a standard company labor and equipment rate schedule will be provided for your approval. On routine predefined work, a lump sum amount can often be established. For larger more complex endeavors, a project cost estimate and schedule can be provided for your consideration.

SCOPE OF SERVICES

D. R. Griffin & Associates, Inc can provide comprehensive start-to-finish services, or anywhere in between, to meet the needs of our pipeline, oil and gas, utility and other clients. D. R. Griffin & Associates offers the following services:

Planning and Studies: • Feasibility studies • Budget cost estimates • Conceptual design • Environmental & regulatory planning

• Operations analysis • Flow capacity and hydraulic studies • Facility evaluations.

Oil & Gas Development: • Archeology coordination • BLM road staking, design and permitting • Environmental permit (EA/EIS)

Fabrication Assembly Huntington

Surveying and Mapping: • Oil & gas well staking • Area field maps • USGS topographic maps • Aerial photograph control & mapping • Preliminary route selection • Route alignment surveys • Site boundary & topographic surveys • Alignment & construction staking

• As-built pipeline inventory surveys • Facility inventory surveys • Clearing & grading staking • Parcel, easement & boundary surveys • Legal plats and descriptions • Route alignment sheets • Construction drawings • As-built documentation • Site improvements, grading and drainage • Permit drawings – oil & gas wells, water rights, discharges, roads • Crossing drawings: highways, roads, railroads, streams, canals, overhead lines • Environmental & archeology exhibits.

Pipeline & Facilities Engineering: • Route selection • Pipeline alignment maps • P.O.D. maps • Crossings and spans • Pig launcher/receiver facilities • Slug catchers & condensate recovery • Internal inspections & testing • Cathodic protection systems • High voltage interference • Block valves • ESD facilities • Tie-in facilities • Metering and flow quality monitoring

• Pressure and flow control • Mechanical design • Civil design • Structural design • Line pipe, valves, fittings and fabrication parts • Line pipe coatings • Planning and scheduling • Contract documents and bid forms • System audits • Rehabilitation analysis • Preliminary geotechnical investigations • Land slide and slope stability mitigation • Stream erosion mitigation

• FERC, DOT, ASME, PSC compliance • Piping
